S4 Table. Comparison of long-read NGS and quadplex model integrity estimates.
Extracted ssAAV9-BIIB1 genomes were annealed and purified to generate duplex templates suitable for sequencing. The same purified duplex samples were analyzed by long-read NGS and by quadplex droplet dPCR followed by quadplex model analysis. Resulting estimates of percentage of intact genomes are shown for method comparison.

Material	Condition	intact rate NGS (%) n=1	intact rate ddPCR quadplex model of NGS samples (% n=1)
AAV9-BIIB1	Control	87	68
	5 min 95°C	78	59
	15 min 95°C	38	22
